

## **New Update Facility Pilot -- Version 2.1.3**

The topic update-setup can be used for all FAP versions, planer up to full version.

For client-versions a separate update-setup is required.

This update does not affect the Falcon-installation on the PC.

We strongly recommend to update the Falcon driver to its topic version 1.7 as well.

### Important improvements of this version are:

- Compatible with Windows 7 (32-Bit version)
  
- Within the tooltip of the visualisation editor the group address can be displayed in front of the name.  
To be adjusted in the Registry:[HKEY\_CURRENT\_USER\Software\ESF Software GmbH\JUNG Facility Pilot Visualisation: Editor\Styles] .  
The binary value of styleKNX must be set to 1.
  
- A new browser-control- in addition to the existing ones is assigned to a text variable.  
The value of the text variable will be interpreted as an URL.
- With all three browser controls parameter can be adjusted:
  - Display without toolbar
  - Display without scrollbar
  - Display without frames
  - Context menu within the browser with right mouse click.
  
- The semitransparent menu bar in the full screen player mode can be faded out permanently.  
To be adjusted in the registry [HKEY\_CURRENT\_USER\Software\ESF Software GmbH\JUNG Facility Pilot Visualisation:Player\Settings\FullScreenMode]  
The binary value of: Allow Full Screen Toolbar must be set to 1.
  
- Correction: when copying display elements the assignments to the data points are kept (send value, update).
